

Extracting and Visualizing Stock Data

Description

Extracting essential data from a dataset and displaying it is a necessary part of data science; therefore individuals can make correct decisions based on the data. In this assignment, you will extract some stock data, you will then display this data in a graph.

Table of Contents

- Define a Function that Makes a Graph
- Question 1: Use yfinance to Extract Stock Data
- Question 2: Use Webscraping to Extract Tesla Revenue Data
- Question 3: Use yfinance to Extract Stock Data
- Question 4: Use Webscraping to Extract GME Revenue Data
- Question 5: Plot Tesla Stock Graph
- Question 6: Plot GameStop Stock Graph

Estimated Time Needed: 30 min

from bs4 import BeautifulSoup

Note:- If you are working Locally using anaconda, please uncomment the following code and execute it.

```
In [1]: #!pip install yfinance==0.2.38
#!pip install pandas==2.2.2
#!pip install nbformat
In []: !pip install yfinance==0.1.67
!mamba install bs4==4.10.0 -y
!pip install nbformat==4.2.0

In [4]: import yfinance as yf
import pandas as pd
import requests
```

```
import plotly.graph_objects as go
from plotly.subplots import make_subplots
```

In Python, you can ignore warnings using the warnings module. You can use the filterwarnings function to filter or ignore specific warning messages or categories.

```
In [5]: import warnings
# Ignore all warnings
warnings.filterwarnings("ignore", category=FutureWarning)
```

Define Graphing Function

In this section, we define the function <code>make_graph</code> . You don't have to know how the function works, you should only care about the inputs. It takes a dataframe with stock data (dataframe must contain Date and Close columns), a dataframe with revenue data (dataframe must contain Date and Revenue columns), and the name of the stock.

```
In [63]:
    def make_graph(stock_data, revenue_data, stock):
        fig = make_subplots(rows=2, cols=1, shared_xaxes=True, subplot_titles=("Histori stock_data_specific = stock_data[stock_data.Date <= '2021--06-14']
        revenue_data_specific = revenue_data[revenue_data.Date <= '2021-04-30']
        fig.add_trace(go.Scatter(x=pd.to_datetime(stock_data_specific.Date, infer_datet fig.add_trace(go.Scatter(x=pd.to_datetime(revenue_data_specific.Date, infer_datet fig.update_xaxes(title_text="Date", row=1, col=1)
        fig.update_xaxes(title_text="Date", row=2, col=1)
        fig.update_yaxes(title_text="Price ($US)", row=1, col=1)
        fig.update_yaxes(title_text="Revenue ($US Millions)", row=2, col=1)
        fig.update_layout(showlegend=False, height=900, title=stock, xaxis_rangeslider_visible=True)
        fig.show()</pre>
```

Question 1: Use yfinance to Extract Stock Data

Using the Ticker function enter the ticker symbol of the stock we want to extract data on to create a ticker object. The stock is Tesla and its ticker symbol is TSLA.

```
In [6]: TSLA = yf.Ticker('TSLA')
```

Using the ticker object and the function history extract stock information and save it in a dataframe named tesla_data. Set the period parameter to max so we get information for the maximum amount of time.

```
In [ ]: tesla_data = TSLA.history(period = 'max')
  tesla_data
```

Reset the index using the <code>reset_index(inplace=True)</code> function on the tesla_data

DataFrame and display the first five rows of the <code>tesla_data</code> dataframe using the <code>head</code> function. Take a screenshot of the results and code from the beginning of Question 1 to the results below.

```
In [66]: tesla_data.reset_index(inplace = True)
   tesla_data.head()
```

O.,	+	Γ.	c	c	٦	
υu	L	Ι'	O	O	-	4

•		level_0	index	Date	Open	High	Low	Close	Volume	Dividends	Sto Sp
	0	0	0	2010- 06-29	1.266667	1.666667	1.169333	1.592667	281494500	0	
	1	1	1	2010- 06-30	1.719333	2.028000	1.553333	1.588667	257806500	0	
	2	2	2	2010- 07-01	1.666667	1.728000	1.351333	1.464000	123282000	0

	4	4	4	2010- 07-06	1.333333	1.333333	1.055333	1.074000	103003500	0	

Question 2: Use Webscraping to Extract Tesla Revenue Data

Use the requests library to download the webpage https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBMDeveloperSkillsNetwork-PY0220EN-SkillsNetwork/labs/project/revenue.htm Save the text of the response as a variable named html_data .

```
In [25]: url = 'https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBMDevelo
    r = requests.get(url)
    html_data = r.text
```

Parse the html data using beautiful_soup .

```
In [ ]: html_content = BeautifulSoup(html_data,'html.parser')
```

Using BeautifulSoup or the read_html function extract the table with Tesla

Revenue and store it into a dataframe named tesla_revenue. The dataframe should have columns Date and Revenue.

▶ Click here if you need help locating the table

```
In [39]: table = html_content.find_all('tbody')[1]
    dict_list = []
    for row in table.find_all('tr'):
        col = row.find_all('td')
        date = col[0].text
        revenue = col[1].text
        dict1 = {'Date':date,'Revenue':revenue}
        dict_list.append(dict1)

## make dataframe
tesla_revenue = pd.DataFrame(dict_list, columns = ['Date','Revenue'])
```

Execute the following line to remove the comma and dollar sign from the Revenue column.

```
In [40]: tesla_revenue["Revenue"] = tesla_revenue['Revenue'].str.replace(',|\$',"")
```

Execute the following lines to remove an null or empty strings in the Revenue column.

```
In [41]: tesla_revenue.dropna(inplace=True) ## null row
tesla_revenue = tesla_revenue[tesla_revenue['Revenue'] != ""] ## empty rwo
```

Display the last 5 row of the tesla_revenue dataframe using the tail function. Take a screenshot of the results.

```
In [42]: tesla_revenue.tail()
```

Out[42]:		Date	Revenue
	48	2010-09-30	31
	49	2010-06-30	28
	50	2010-03-31	21
	52	2009-09-30	46
	53	2009-06-30	27

Question 3: Use yfinance to Extract Stock Data

Using the Ticker function enter the ticker symbol of the stock we want to extract data on to create a ticker object. The stock is GameStop and its ticker symbol is GME.

```
In [44]: GME = yf.Ticker('GME')
```

Using the ticker object and the function history extract stock information and save it in a dataframe named <code>gme_data</code>. Set the <code>period</code> parameter to <code>max</code> so we get information for the maximum amount of time.

```
In [45]: gme_data = GME.history(period = 'max')
```

Reset the index using the <code>reset_index(inplace=True)</code> function on the <code>gme_data</code> DataFrame and display the first five rows of the <code>gme_data</code> dataframe using the <code>head</code> function. Take a screenshot of the results and code from the beginning of Question 3 to the results below.

```
In [46]: gme_data.reset_index(inplace=True)
   gme_data.head()
```

Out [46]:				
	\cap	144	1161	
	\cup	u L	1401	

	Date	Open	High	Low	Close	Volume	Dividends	Stock Splits
0	2002-02- 13	1.620128	1.693350	1.603296	1.691667	76216000	0.0	0.0
1	2002-02- 14	1.712707	1.716074	1.670626	1.683250	11021600	0.0	0.0
2	2002-02- 15	1.683250	1.687458	1.658001	1.674834	8389600	0.0	0.0
3	2002-02- 19	1.666417	1.666417	1.578047	1.607504	7410400	0.0	0.0
4	2002-02- 20	1.615920	1.662210	1.603296	1.662210	6892800	0.0	0.0

Question 4: Use Webscraping to Extract GME Revenue Data

Use the requests library to download the webpage https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBMDeveloperSkillsNetwork-PY0220EN-SkillsNetwork/labs/project/stock.html. Save the text of the response as a variable named html_data .

```
In [48]: url2 = 'https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBMDevel
    req = requests.get(url2)
    html_data = req.text
```

Parse the html data using beautiful_soup .

```
In [74]: soup = BeautifulSoup(html_data,'html.parser')
```

Using BeautifulSoup or the read_html function extract the table with GameStop
Revenue and store it into a dataframe named gme_revenue. The dataframe should have columns Date and Revenue. Make sure the comma and dollar sign is removed from the Revenue column using a method similar to what you did in Question 2.

► Click here if you need help locating the table

```
In [79]: table = soup.find_all('tbody')[1]
          dict_list2 = []
          for row in table.find_all('tr'):
              col = row.find_all('td')
              date = col[0].text
              revenue = col[1].text
              dict2 = {'Date':date, 'Revenue':revenue}
              dict_list2.append(dict2)
          ## make dataframe
          gme_revenue = pd.DataFrame(dict_list2, columns = ['Date','Revenue'])
         gme_revenue['Revenue'] = gme_revenue['Revenue'].str.replace(', |\$','')
In [80]:
In [81]: gme_revenue = gme_revenue[gme_revenue['Revenue'] != ""]
          Display the last five rows of the gme_revenue dataframe using the tail function. Take a
          screenshot of the results.
In [82]:
          gme_revenue.tail()
Out[82]:
                   Date Revenue
          57 2006-01-31
                             1667
          58 2005-10-31
                              534
          59 2005-07-31
                              416
          60 2005-04-30
                              475
          61 2005-01-31
                              709
```

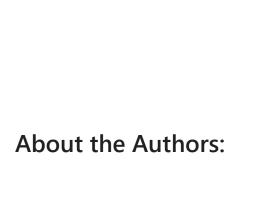

Question 5: Plot Tesla Stock Graph

Use the make_graph function to graph the Tesla Stock Data, also provide a title for the graph. The structure to call the make_graph function is make_graph(tesla_data, tesla_revenue, 'Tesla'). Note the graph will only show data upto June 2021.

```
In [67]: make_graph(tesla_data, tesla_revenue, 'Tesla')
```

Use the make_graph function to graph the GameStop Stock Data, also provide a title for the graph. The structure to call the make_graph function is make_graph(gme_data, gme_revenue, 'GameStop'). Note the graph will only show data upto June 2021.

In [83]: make_graph(gme_data, gme_revenue, 'GameStop')

Joseph Santarcangelo has a PhD in Electrical Engineering, his research focused on using machine learning, signal processing, and computer vision to determine how videos impact human cognition. Joseph has been working for IBM since he completed his PhD.
